of which: loss-making non-financial units	1665,05	1497,28	-	167,77	-

### Notes to table:

Liabilities are defined as the stock of liabilities at the end of the year as reported in the individual financial statements of public corporations. The public corporations are defined as corporations with the ratio of public ownership of the capital 50 % and more. For the public corporations partially owned by the general government, only the part of liabilities corresponding to the government participation in the capital was taken into account. Public corporations classified within the general government sector were excluded from calculations.

For 2014, data was available for all 48 public corporations controlled by the central government. Data was available for 323 corporations controlled by the local government out of 471.
